DIGITAL LITERACY PROJECT REPORT

- Submitted by: Nandini Nigam (25BHI10091)

Introduction

This project was completed as part of the Digital Literacy course with the objective of understanding and applying essential digital skills required in today's world. As a student, being digitally literate is not limited to using devices but also involves using technology responsibly, safely, and effectively.

Through this project, I worked on multiple tasks that focused on digital awareness, professional online presence, communication etiquette, and cyber safety. Each task provided practical exposure to tools and platforms that are commonly used in academic and professional environments.

Overall, this project helped me gain a better understanding of how to navigate the digital world more confidently and responsibly.

Task-1 : Infographic

For this task, I created an infographic using Canva to represent the concept of digital literacy in a simple and visually engaging manner. The infographic included key aspects such as understanding digital literacy, safe internet practices, and maintaining a professional online presence.

While designing the infographic, I focused on keeping the content concise and easy to understand while also ensuring that the visual layout was clean and organized. I used icons and structured sections to make the information more accessible.

One challenge I faced was balancing the amount of information with the design, as adding too much text made the infographic look cluttered. However, after refining the content and layout, I was able to create a clear and effective design.

This task helped me understand how visual representation can improve communication and make information more engaging.

Task-2 : Digital Portfolio

In this task, I created and updated my profiles on GitHub, LinkedIn, and HackerRank. Each platform serves a different purpose. GitHub is used for showcasing projects and coding work, LinkedIn helps in building a professional network, and HackerRank is useful for practicing coding and improving problem-solving skills.

This task made me realize the importance of maintaining a professional online presence. Earlier, I had not focused much on how my digital identity appears to others, but now I understand that it plays an important role in internships and future opportunities.

Over the next few years, I plan to regularly update my GitHub with projects, improve my LinkedIn profile by adding achievements and skills, and continue solving coding problems to strengthen my technical abilities.

Overall, this task helped me take the first step toward building a strong and professional digital profile.

Task-3 : Platforms

For this task, I explored both a coding platform and a collaboration tool. I used HackerRank to solve a beginner-level problem, which helped me understand how coding platforms function and how problems are structured.

Task-4 : E-mail Etiquette

In this task, I learned the importance of professional communication through email writing and social media guidelines. Writing formal emails helped me understand how tone, structure, and clarity play a significant role in communication.

A situation where poor digital communication can create problems is when a student sends an informal or unclear email to a professor. This can lead to misunderstandings or a negative impression.

Such issues can be avoided by following proper email etiquette, including writing a clear subject line, using respectful language, and maintaining a structured format.

This task improved my understanding of how to communicate professionally in both academic and professional settings.In addition, I created a Google Form as a Digital Literacy Awareness Quiz consisting of five questions. The form included both multiple-choice and short-answer questions to test basic knowledge about online safety and digital practices.

Creating the form was an interesting experience as it allowed me to think from both the learner's and creator's perspective. It also showed me how tools like Google Forms can be used effectively for quizzes and awareness activities.

Overall, this task helped me become familiar with platforms that support both learning and collaboration in an academic environment.

Task-5 : Cybercrime

While researching UPI fraud, I was surprised by how easily people can be tricked into approving payment requests without fully understanding the process. Fraudsters often use convincing methods that exploit a lack of awareness.

This made me realize the importance of being cautious while using digital payment systems. One habit I will change is carefully verifying every transaction request before approving it.

This task increased my awareness about online financial safety and highlighted the importance of staying alert while using digital platforms in everyday life.

Conclusion

This project provided a comprehensive understanding of digital literacy and its practical applications. It helped me develop awareness about online safety, professional presence, and effective communication.

Through various tasks, I explored multiple tools and platforms that will be useful in my academic and professional journey. The project also encouraged me to reflect on my digital habits and improve them.

Overall, this experience has helped me become more confident and responsible while using digital technologies.
